

Geometry

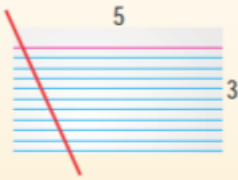

8.5: Area of Parallelograms and Rhombuses

Name: _____

 Students will find formulas for the areas of parallelograms and rhombuses and use them to find areas and missing side lengths.

Geo-Activity  **Exploring the Area of a Parallelogram**

 Use a straightedge to draw a line through one of the vertices of an index card.

 Cut out the triangle. Tape the triangle to the opposite side to form a parallelogram.

- How does the area of the parallelogram compare to the area of the rectangular index card? How do their bases compare? How do their heights compare?

- The area of a rectangle and parallelogram are exactly the same. The height and base lengths are also the same.*
- Write a conjecture about the formula for the area of a parallelogram.

$$A = bh$$

Bases of a parallelogram:

either pair of // sides

Height of a parallelogram:

always \perp to base

Try: Find the area of the parallelogram.

$$A = 8 \cdot 12$$
$$A = 96 \text{ yd}^2$$

$$A = 7 \cdot 11$$
$$A = 77 \text{ mm}^2$$

$$A = 9 \cdot 6$$
$$A = 54 \text{ m}^2$$

Example 1: Find the height of the parallelogram given that its area is 78 square feet.

$$A = bh$$

$$\frac{78}{12} = \frac{bh}{12}$$

$$h = 6.5 \text{ ft}$$

Try: Find the missing measurement.

a) $A = 72 \text{ in.}^2$

$$A = bh$$

$$\frac{72}{12} = \frac{bh}{12}$$

$$h = 6 \text{ in}$$

b) $A = 28 \text{ cm}^2$

$$A = bh$$

$$\frac{28}{7} = \frac{7h}{7}$$

$$4 \text{ cm} = h$$

Example 2: Solve for x using the given area.

a)

$$\begin{aligned}
 A &= bh \\
 15 &= 5(x-1) \\
 15 &= 5x - 5 \\
 +5 & \quad +5 \\
 \hline
 20 &= 5x \\
 \frac{20}{5} &= \frac{5x}{5} \\
 \boxed{x=4}
 \end{aligned}$$

$$\begin{aligned}
 15 &= 5(x-1) \\
 \frac{15}{5} &= \frac{5(x-1)}{5} \\
 3 &= x-1 \\
 +1 & \quad +1 \\
 \hline
 4 &= x
 \end{aligned}$$

TRY: Solve for x using the given area.

$$\begin{aligned}
 A &= bh \\
 24 &= x(x+5) \\
 24 &= x^2 + 5x \\
 -24 & \quad -24 \\
 \hline
 0 &= x^2 + 5x - 24
 \end{aligned}$$

$$0 = (x-3)(x+8)$$

$$\begin{aligned}
 x-3 &= 0 \\
 +3 & \quad +3 \\
 \hline
 x &= 3
 \end{aligned}$$

$$\begin{aligned}
 x+8 &= 0 \\
 -8 & \quad -8 \\
 \hline
 x &= -8
 \end{aligned}$$

$$\boxed{x=3}$$

$$\cancel{x=-8}$$

b)

$$\begin{aligned}
 &\text{mult} \\
 &\underline{-55} \\
 &\text{Add} \\
 &\underline{-6}
 \end{aligned}$$

$$A = bh$$

$$55 = x(x-6)$$

$$55 = x^2 - 6x$$

$$\begin{aligned}
 -55 & \quad -55 \\
 0 &= x^2 - 6x - 55
 \end{aligned}$$

$$0 = (x-11)(x+5)$$

$$\begin{aligned}
 x-11 &= 0 \\
 +11 & \quad +11 \\
 \hline
 x &= 11
 \end{aligned}$$

$$\begin{aligned}
 x+5 &= 0 \\
 -5 & \quad -5 \\
 \hline
 x &= -5
 \end{aligned}$$

$$\rightarrow \boxed{x=11}$$

$$\cancel{x=-5}$$

$$\begin{aligned}
 &\text{mult} \\
 &\underline{-24}
 \end{aligned}$$

$$\begin{aligned}
 &\text{Add} \\
 &\underline{+5}
 \end{aligned}$$

$$1, 2, 3, 4, 6, 8, 12, 24$$

$$-3, 8$$

Rhombuses

$$A = \frac{d_1 \cdot d_2}{2}$$

Area of Rhombuses

$$\text{Area} = \frac{\text{diagonal}_1 \times \text{diagonal}_2}{2}$$

$$A = \frac{d_1 \cdot d_2}{2}$$

Example 3: Find the area of each rhombus.

$$A = \frac{d_1 \cdot d_2}{2}$$

$$A = \frac{10 \cdot 14}{2}$$

$$A = 70 \text{ in}^2$$

b)

$$A = \frac{18 \cdot 12}{2}$$

$$A = 108 \text{ m}^2$$

You Try: Find the area of the parallelogram or the rhombus.

a.

b.
